

CLAIMS:

1. A lumbar supporter comprising:
a lumbar fixed belt constituted by a band, at least a part of which is a stretchable portion, and fitted from a lumbodorsal region toward a lumboabdominal region of a human body; and
a pelvic fixed belt fitted substantially in parallel along a pelvic angle of inclination of the human body from the lumbodorsal region toward the lumboabdominal region.
2. The lumbar supporter according to claim 1, wherein an angle of inclination of said pelvic fixed belt is set to 20° to 30° forward toward said lumboabdominal region with respect to a trunk axis as a base axis.
3. The lumbar supporter according to claim 1 or 2, wherein said lumbar fixed belt and said pelvic fixed belt are sewn together at substantial centers thereof.
4. The lumbar supporter according to any one of claims 1 to 3, wherein said lumbar fixed belt has a reinforcing plate placed along said lumbodorsal region.
